

WEST NILE VIRUS RNA CONTROL

MBC069: Purified RNA of West Nile virus.

LOT SPECIFICATIONS:

Microorganism: West Nile virus.

Preparation: Grown in VERO infected cells.

TECHNICAL DATA:

Presentation: Lyophilized.

Concentration: 50 ng/μl when reconstituted.

Instructions for reconstitution:

- 1.-Centrifuge 1 minute at 1000 g.
- 2.-Add 50 μl of sterile bidistilled water and mix until completely resuspended. The concentration will be 50 ng/μl.
- 3.-Shake with vortex for 30 seconds to dissolve and homogenize completely.

Extract preparation: Guanidine thiocyanate solubilization, 2 M sodium acetate treatment, phenol/chloroform extraction and ethanol precipitation.

Shipping and storage:

Special transport conditions not required. Reconstitute upon receipt. Store between -70°C and -90°C after reconstitution. Avoid multiple freeze-thaw cycles as product degradation may result.

Recommendations and precautions:

This product is not for diagnostic use.

This product is for research use only.

This lot of RNA was prepared from West Nile virus. The material should be handled and disposed of as potentially infectious. Observe the local regulations for clinical waste disposal.

RT-PCR analysis of RNA control: RT-PCR analysis was performed with a specific oligo pair on 50 ng of purified West Nile virus RNA. The reaction produced a 408 bp fragment. It was visualized on a 2% agarose gel using ethidium bromide staining. The gel photograph is shown below:

Line	Sample
1	Molecular size marker (100 bp)
2	Negative control
3	408 bp amplified fragment
